# **TECHNICAL DATA SHEET**

# ADVA® XT2

High Range Water Reducing Admixture

# Concrete Solutions

Chryso

# DESCRIPTION

**ADVA**<sup>\*</sup> **XT2** is a time-activated polycarboxylate-based admixture that enhances workability, including slump and flow. When used with standard, mid-range, or high-range water reducers, it significantly increases the duration of slump or flow retention.

Meets or exceeds the requirements of ASTM C494 Type A

# ADVANTAGES

- Provides flexible slump retention through adaptable dosing.
- Increases slump life with minimal impact on set times.
- Allows better control of operational costs by adjusting slump life retention as needed during the initial dosage adjustment.
- Eliminates the need for re-tempering with water at the job site.
- Improves workability at job sites, resulting in easier placement.

# FIELDS OF APPLICATION

- All Cement Types
- Precast Concrete
- Ready-Mix Concrete
- Post Tensioned and Prestressed Concrete
- Self Consolidating Concrete (SCC)

### Method of Use

#### Dosage

- ADVA<sup>®</sup> XT2 can vary with the type of application and the desired slump specifications, but will range from 2 to 10 oz/100 lbs (130 to 650 mL/100 kg) of cementitious as an extended slump life admixture.
- In most instances, the addition of 4 to 6 oz/100 lbs (260 to 390 mL/100 kg) of cementitious will be sufficient.
- At higher dosage rates, some water may have to be removed from the mix to maintain plastic concrete cohesion.
- Should conditions require using more than the recommended addition rates, please consult your CHRYSO® representative.

#### Additional Usage Recommandations

 Specifically intended for use where extended workability with minimal time of setting extension is desired without compromising plastic or hardened concrete properties.

#### Implementation

- In general, it is recommended that ADVA<sup>®</sup> XT2 be added to the concrete mix near the end of the batch sequence for optimum performance. Different sequencing may be used if local testing shows better performance.
- Pretesting of the concrete mix should be performed before use and as conditions and materials change in order to assure compatibility
  with other admixtures, and to optimize dosage rates, addition times in the batch sequencing and concrete performance.

#### Equipment

• A complete line of accurate, automatic dispensing equipment is available.

The information contained in this technical data sheet is given to the best of our knowledge and the result from extensive testing - which were conducted in order to remain as objective as possible. However, it cannot, in any case, be considered as a warranty involving our liability in case of misuse or any different use of our products, other than those from the Application' paragraph of this technical data sheet. Some application tests should be carried out before using the product to ensure that the methods of use and conditions of application of the product are satisfactory. Our technical assistance is at the disposal of the users.

## **TECHNICAL DATA SHEET**

High Range Water Reducing Admixture

#### **Complimentary Products**

- ADVA<sup>®</sup> XT2 is compatible with most CHRYSO<sup>®</sup> admixtures as long as they are added separately to the concrete mix. However, ADVA<sup>®</sup> products are not recommended for use in concrete containing naphthalene based admixtures and melamine-based admixtures.
- For concrete that requires air entrainment, the use of an ASTM C260 air-entraining agent is recommended to provide suitable air void parameters for freeze-thaw resistance.

#### Performances

- Produces concrete with consistent slump properties while providing the degree of workability necessary to provide easy placement and consolidation.
- Eliminates the need for re-tempering at job sites to achieve the desired workability.
- For concrete performance information using ADVA® XT2, please see Technical Bulletin TB-0609

CHARACTERISTICS	

Product Nature	Liquid
Color	Brown
Shelf life	12 months
CI⁻ lons content	< 0,100 %
Specific gravity (25°C)	1,065
рН (25°С)	5,00

# PRECAUTIONS

- In storage, and for proper dispensing, product should not experience prolonged exposure below 32°F (0°C) nor above 132°F (55°C).
- Product will begin to freeze at approximately 32°F (0°C), but will return to full strength after thawing and thorough agitation.

Prior to any use, please read carefully the Safety data Sheet.

## PACKAGING

- Bulk
- 210 L (55 Gallons) Drum
- 1000L Tote (275 gallons)
